INTRODUCTION

Music is the art or science of combining instrumental sounds or both to produce beauty of for harmony and expression of emotions

Background

Previous research has shown that different people might favor a certain type of music depending on their culture behavior nature of the person gender of the person or how that particular music type affects their lives for example most women prefer country music and R&B while most men prefer dancehall music and reggae Age is also one of the key aspects that influence the music type people tend to favor for example youth tend to like dancehall and reggae music whereas the elderly people tend to like country music .

Problem Statement

Although most people listen to music they don't normally realize the impact of music on the lives. This research is aimed at elaborating the impacts music has on different individuals.

Aim and Objectives

Aim

The research is aimed determining the impacts of music on different people's lives.

Specific Objectives

- To determine the impacts of music on different people's lives .
- To determine the role of music in society
- To determine the type of music listened to by most people.
- To find out reasons why people listen to music

Scope

â€” The research is limited to small geographical area therefore the results might not be very accurate in some instances

METHODOLOGY

During collection of data questionnaires forms were used as well as taking audios. Images were also used. The open data kit app was used to collect the data.
